GitHub: thirurishi | LinkedIn: thirumurugan-kumar

Master's student in Data Science & Analytics at EPITA, seeking a Data internship (Data Analyst, Data Scientist, BI or AI). Project experience across the full data lifecycle: SQL and Python analysis, Power BI dashboards, data-quality pipelines, machine learning and RAG/LLM applications, with a focus on clear, reliable insights for decision-makers.

SKILLS

- **Programming & Data Analytics:** Python (pandas, NumPy), SQL, data cleaning, data validation, statistical analysis, Jupyter Notebook
- **Business Intelligence & Analysis:** Power BI, DAX, Power Query, Excel (Advanced), Matplotlib, Seaborn, dashboard development, KPI, performance, trend and cohort analysis, benchmarking, reporting
- **Machine Learning & AI:** scikit-learn, Random Forest, TensorFlow, PyTorch, Hugging Face Transformers, BERT, LSTM/GRU/TextCNN, NLP, TF-IDF
- **Generative AI & LLMs:** RAG, LangChain, Groq LLM API, FAISS vector search, prompt-based explanations
- **Data Engineering & Databases:** PostgreSQL, SQLite, SQLAlchemy, Apache Airflow, Great Expectations, FastAPI, Docker, Docker Compose, Redis, Grafana
- **Data Quality & CRM:** CRM data management, cleansing, reconciliation, duplicate detection
- **Tools & Ways of Working:** Git, GitHub, Streamlit, PowerPoint, Google Workspace, documentation, process improvement, stakeholder communication, cross-functional collaboration

PROJECTS

Employee Performance Prediction System *Python, scikit-learn, PostgreSQL, Airflow, FastAPI, Docker*

- Developed an end-to-end attrition prediction workflow with a Random Forest classifier, data ingestion, validation, cleansing and prediction history, orchestrated with Apache Airflow and stored in PostgreSQL.
- Served individual and batch predictions via FastAPI and Streamlit, with Great Expectations quality checks, Grafana monitoring and Docker Compose deployment.

Fake News Detection Platform (RAG/LLM) *PyTorch, TensorFlow, BERT, LangChain, FAISS, FastAPI*

- Built a full-stack fake-news detection platform using an ensemble of deep-learning text models (LSTM, GRU, TextCNN, BERT) trained on the LIAR dataset.
- Developed evidence retrieval combining web scraping, BERT relevance classification, FAISS similarity search and RAG/LLM explanations (LangChain, Groq), in a multi-service app with PostgreSQL and Docker Compose.

Repeat Purchase Recovery Analytics *SQL, SQLite, Python, pandas, Power BI*

- Built a six-layer SQL pipeline with 20 SQLite views and 63 read-only validation queries over 93,358 customers and 96,478 delivered orders for cohort retention, segmentation and delivery/review analysis.
- Measured a 3.0% lifetime and 2.28% 90-day repeat-purchase rate to investigate retention, customer lifetime value and churn signals.

Retail Business Intelligence & Profitability Optimisation *SQL, SQLite, Power BI, DAX, Power Query*

- Designed a two-page Power BI dashboard on a fact/dimension model with six DAX measures, analysing 10,194 sales rows across 5,111 orders (2.33M revenue, 12.56% margin).
- Wrote SQL analyses of category, product and discount profitability, and reconciled SQL results with Power BI metrics.

EXPERIENCE

Android Application Development Intern – National Small Industries Corporation (NSIC) December 2022

- Collaborated on software development, testing and documentation within structured project workflows.
- Worked with multidisciplinary teams, strengthening problem-solving, attention to detail and communication.

EDUCATION

Master's in Computer Science – Data Science & Analytics, EPITA, France 2024–2026
Bachelor's in Information Technology, St. Joseph's College of Engineering, India 2020–2024

LANGUAGES

- English – Fluent
- French – Professional Working Proficiency
- Tamil – Native
